

Tumor-associated macrophages promote PD-L1 expression in tumor cells by regulating PKM2 nuclear translocation in pancreatic ductal adenocarcinoma

Qing Xia, Jing Jia, Chupeng Hu, Jinying Lu, Jiajin Li, Haiyan Xu, Jianchen Fang, Dongju Feng, Liwei Wang & Yun Chen

Nature Research, Oncogene
03 December 2021

Presentation Structure

1) Introduction

2) Results

3) Proposed Working Model

4) Take-Home Messages

5) Discussion

PD-1 / PD-L1 immune checkpoint

Pyruvate kinase isozyme M2 (=PKM2)

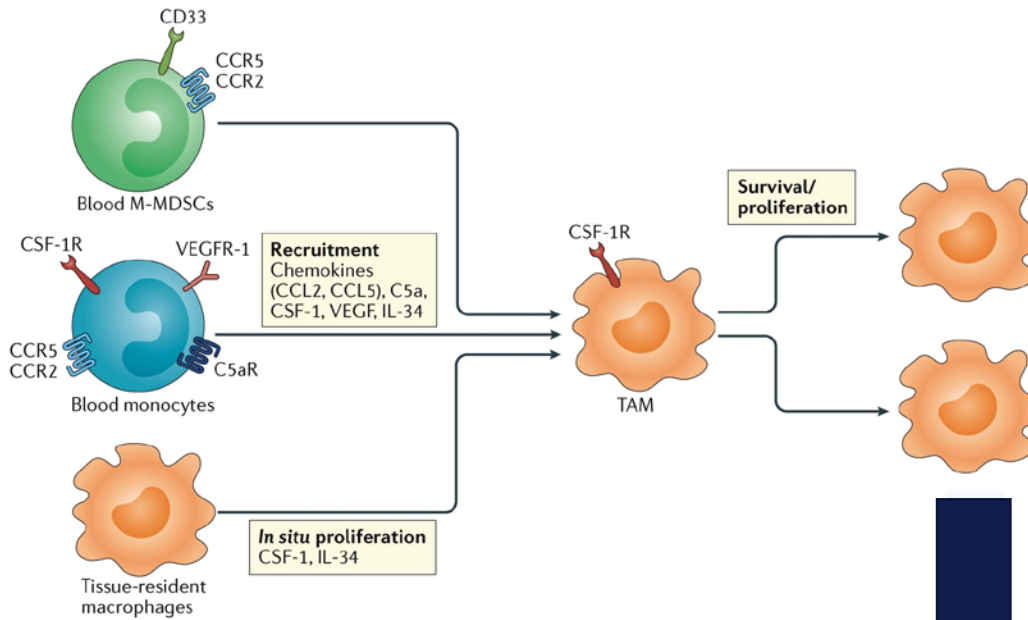

Tetramer: high PK activity - glycolysis

Dimer: nuclear factor involved in PD-L1 upregulation

Tumor-associated macrophages (TAMs)

a TAM precursors

TGF-β₁

Presentation Structure

1) Introduction

2) Results

3) Proposed Working Model

4) Take-Home Messages

5) Discussion

1. Is there a clinical correlation between PD-L1 and PKM2 expression to predict poor prognosis in patients with PDAC?

Does tumor glycolysis facilitate PD-L1 expression in PDACs?

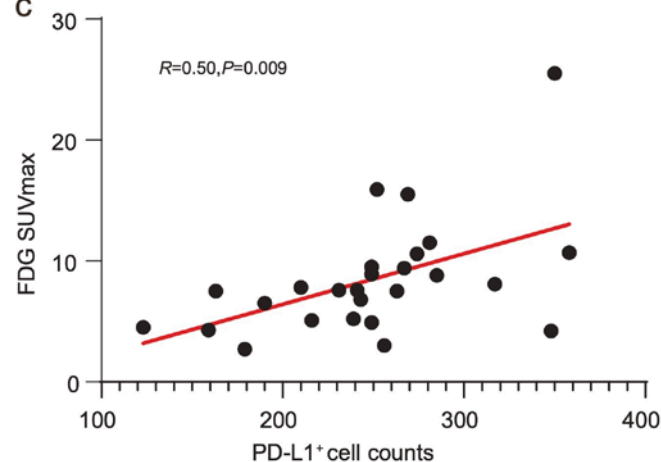

a

b

c

Which key glycolytic genes might be involved in the regulation of PD-L1 ?

→ qRT-PCR

The expressions of PKM2 and PD-L1 were higher in „FDGhigh“ patients than „FDGlow“ patients.

f

Overall survival of patients with PDAC based on PKM2 and PD-L1 expression

g

PD-L1 versus PKM2

Number at risk

High/High	49	5	1	1	0
High/Low	40	9	1	0	0
Low/High	40	7	3	0	0
Low/Low	48	11	6	1	0

Time(Month)

PD-L1hi + PKM2hi VS.
PD-L1lo + PKM2lo

P = 0.039;

HR, 3.019;

95% CI, 1.348–1.775

1. Is there a clinical correlation between PD-L1 and PKM2 expression to predict poor prognosis in patients with PDAC?

→ PD-L1 is associated with high glycolysis activity and its combination with PKM2 predicts a worse prognosis in PDAC

2. Does PKM2 knockdown decrease PD-L1 expression and hence induce antitumor immunity?

PKM2 knockdown decreases PD-L1 expression

PKM2 knockdown decreases PD-L1 expression

b

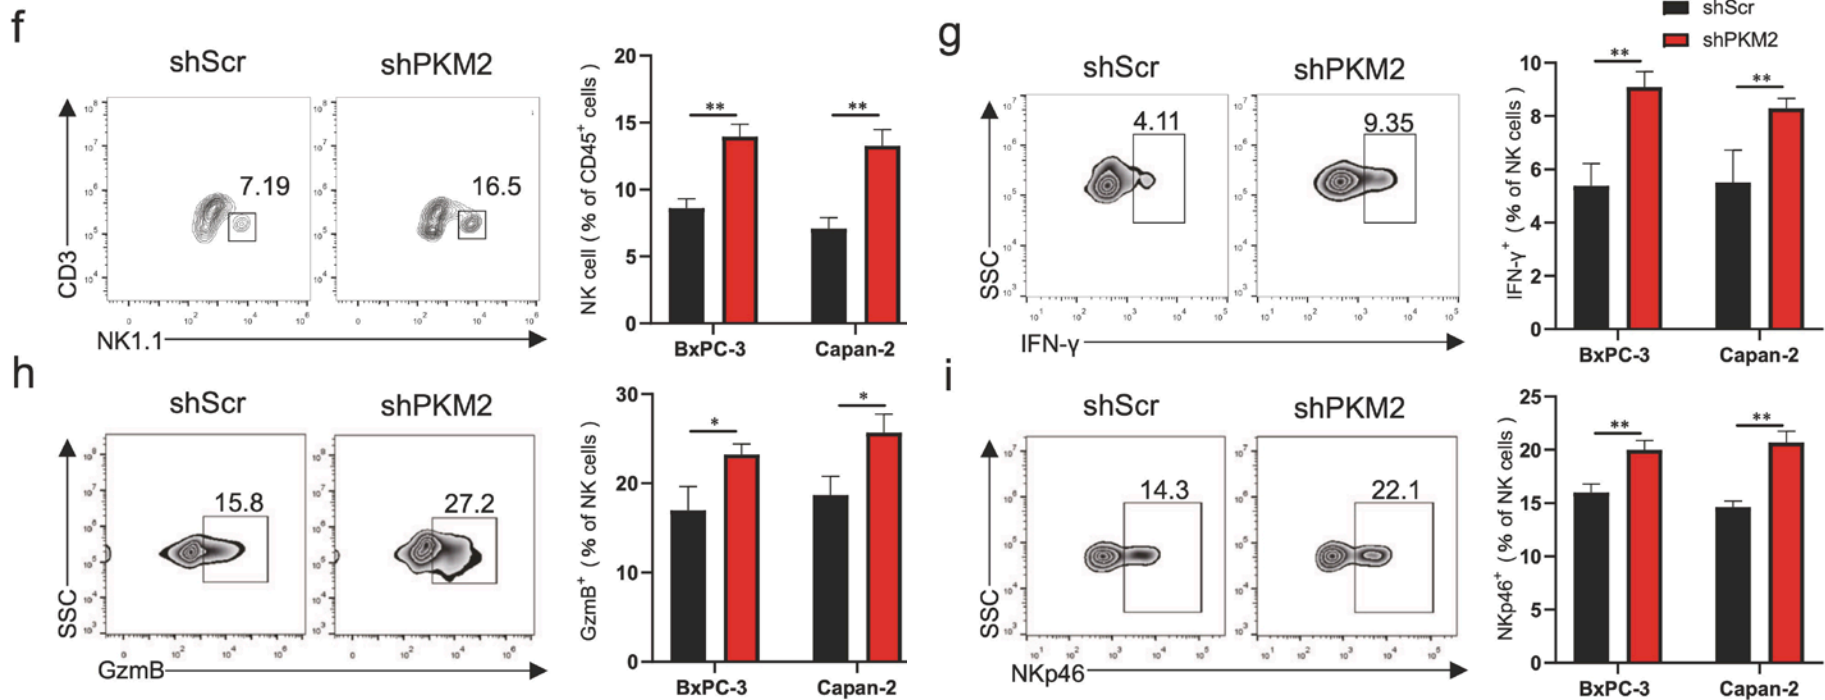

c

Does PKM2 induce changes in tumor-infiltrating immune cells (in nude mice with PDAC) ?

NKs only

2. Does PKM2 knockdown decrease PD-L1 expression and hence induce antitumor immunity?

→ The results suggest that PKM2 knockdown decreases the expression of PD-L1 and might elicit potent antitumor immunity by activating NK cells

3. What is required for PKM2 mediated (and TAM- induced) PD-L1 expression in PDAC?

Is there a correlation between PD-L1, PKM2 and TAMs?

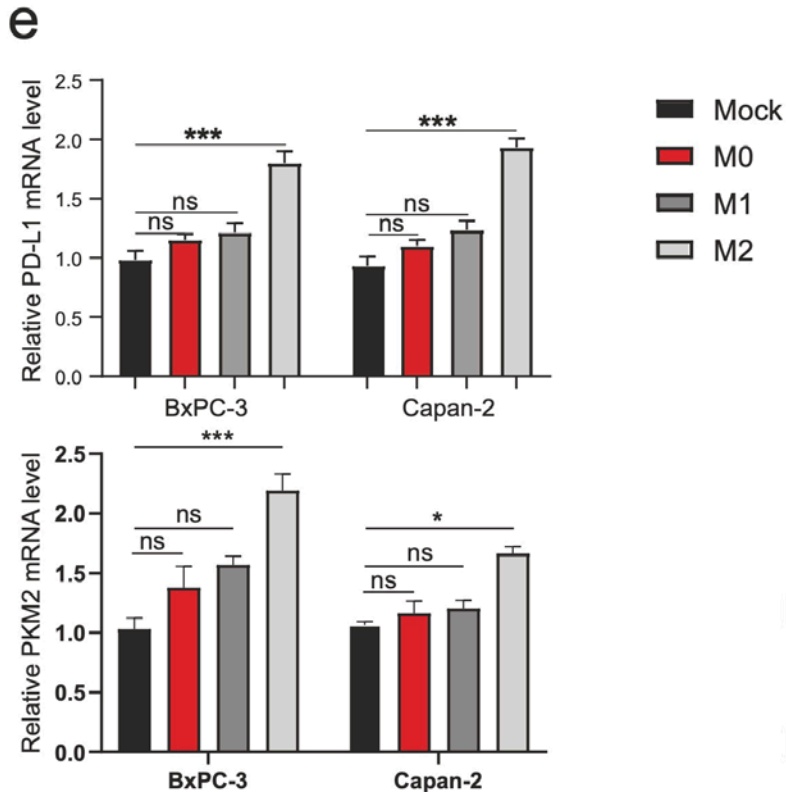

PD-L1, $R = 0.38$, $P < 0.0001$; PKM2, $R = 0.26$, $P < 0.0001$

Is there a correlation between PD-L1, PKM2 and TAMs?

Macrophage-mediated tumor growth and PKM2-induced PD-L1 dysregulation

How can macrophages mediate PKM2-induced PD-L1 dysregulation?

Tetramer:
high PK
activity -
glycolysis

Dimer: nuclear
factor invoved in
PD-L1
upregulation

How can macrophages mediate PKM2-induced PD-L1 dysregulation?

3. What is required for PKM2 mediated (and TAM- induced) PD-L1 expression in PDAC?

→ TAMs may modulate PD-L1 expression by increasing PKM2 nuclear localization.

4. Which TAM-derived factor induces PD-L1 expression via PKM2 nuclear translocation in PDAC cells?

TAM-secreted factors...

TGF-β1 → PD-L1?

PD-L1 expression mediated by TGF- β 1 ?

d

C

Does PKM2 contribute to PD-L1 upregulation via the TGF- β 1 pathway?

d

e

Does PKM2 contribute to PD-L1 upregulation via the TGF- β 1 pathway?

→ PKM2 expression in PDAC cells induced by M2 macrophages was eliminated when the cells were treated with TGF- β 1 inhibitor P144

4. Which TAM-derived factor induces PD-L1 expression via PKM2 nuclear translocation in PDAC cells?

→ TGF- β 1 is a major inflammatory factor secreted by M2 macrophages that upregulates PD-L1 expression by the nuclear translocation of PKM2

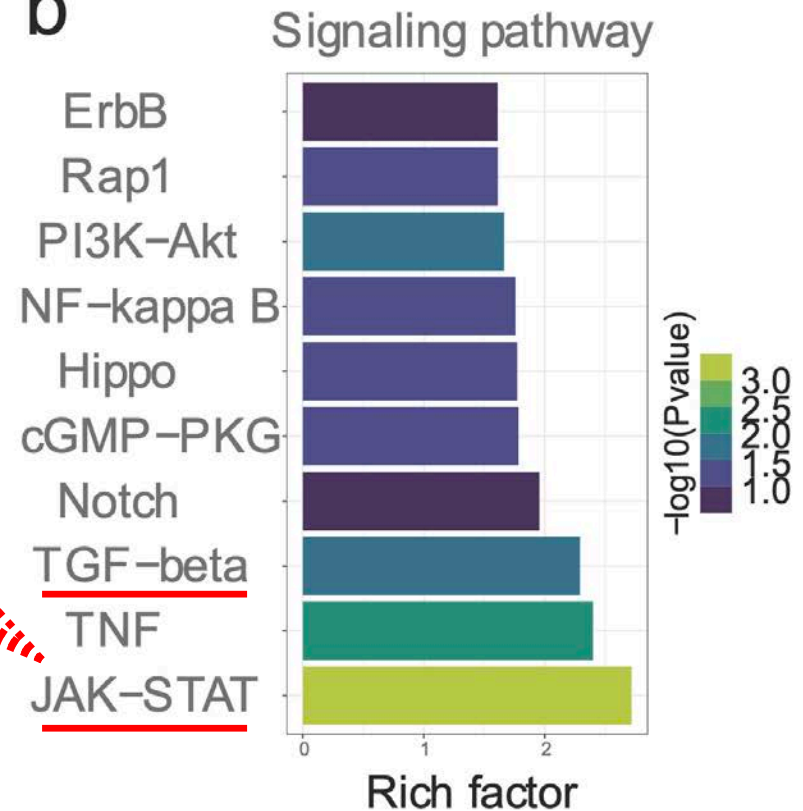

5. Is nuclear translocation of PKM2 and phosphorylation of STAT1 involved in TGF- β 1-induced PD-L1 upregulation?

Which mechanisms are involved in the TGF- β 1-dependent expression of PD-L1 in PDAC?

C

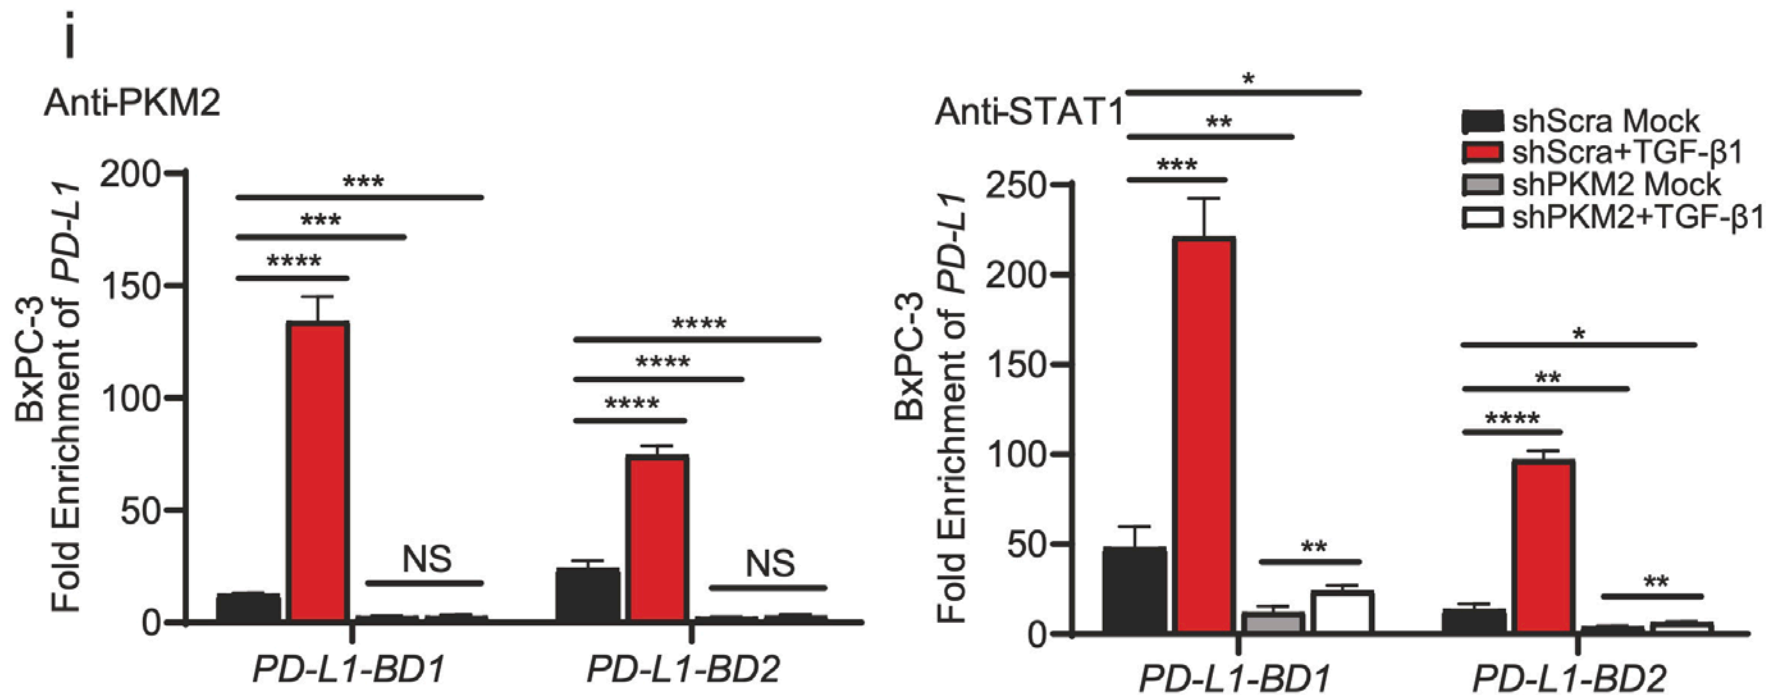

b

What is the relationship between PKM2 and STAT1 in TGF- β 1-induced upregulation of PD-L1

Do PKM2 and p-STAT1 promote the transcription of PD-L1?

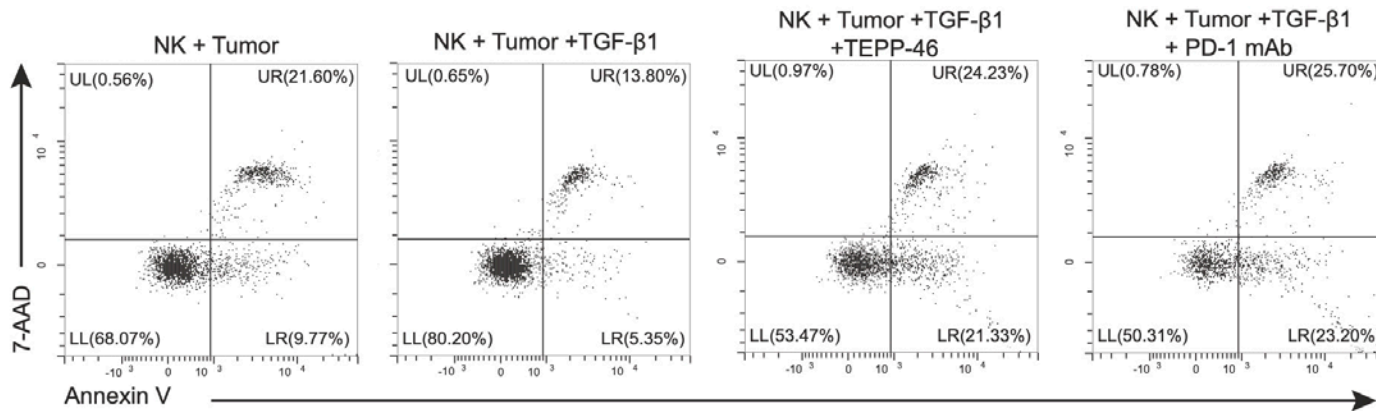

5. Is nuclear translocation of PKM2 and phosphorylation of STAT1 involved in TGF- β 1-induced PD-L1 upregulation?

→ Nuclear translocation of PKM2 and phosphorylation of STAT1 are involved in TGF- β 1-induced PD-L1 upregulation

6. How does PKM2-mediated PD-L1 upregulation effect antitumor immunity of NK cells?

Could targeting PKM2 and PD-L1 enhance the antitumor immunity of NK cells?

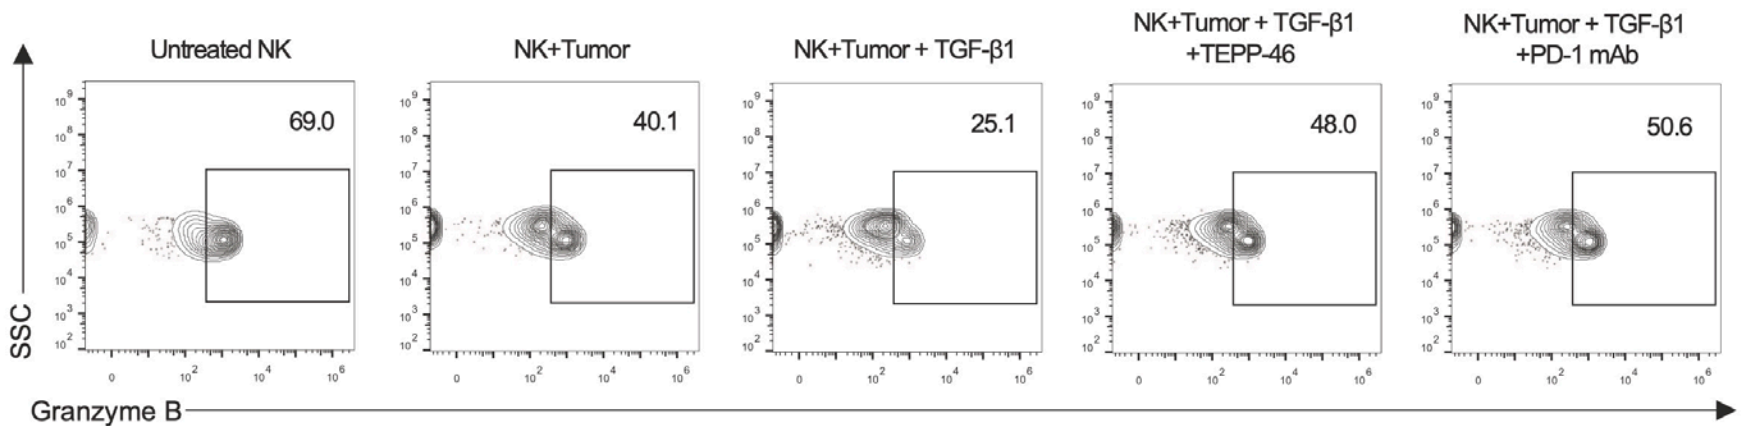

c

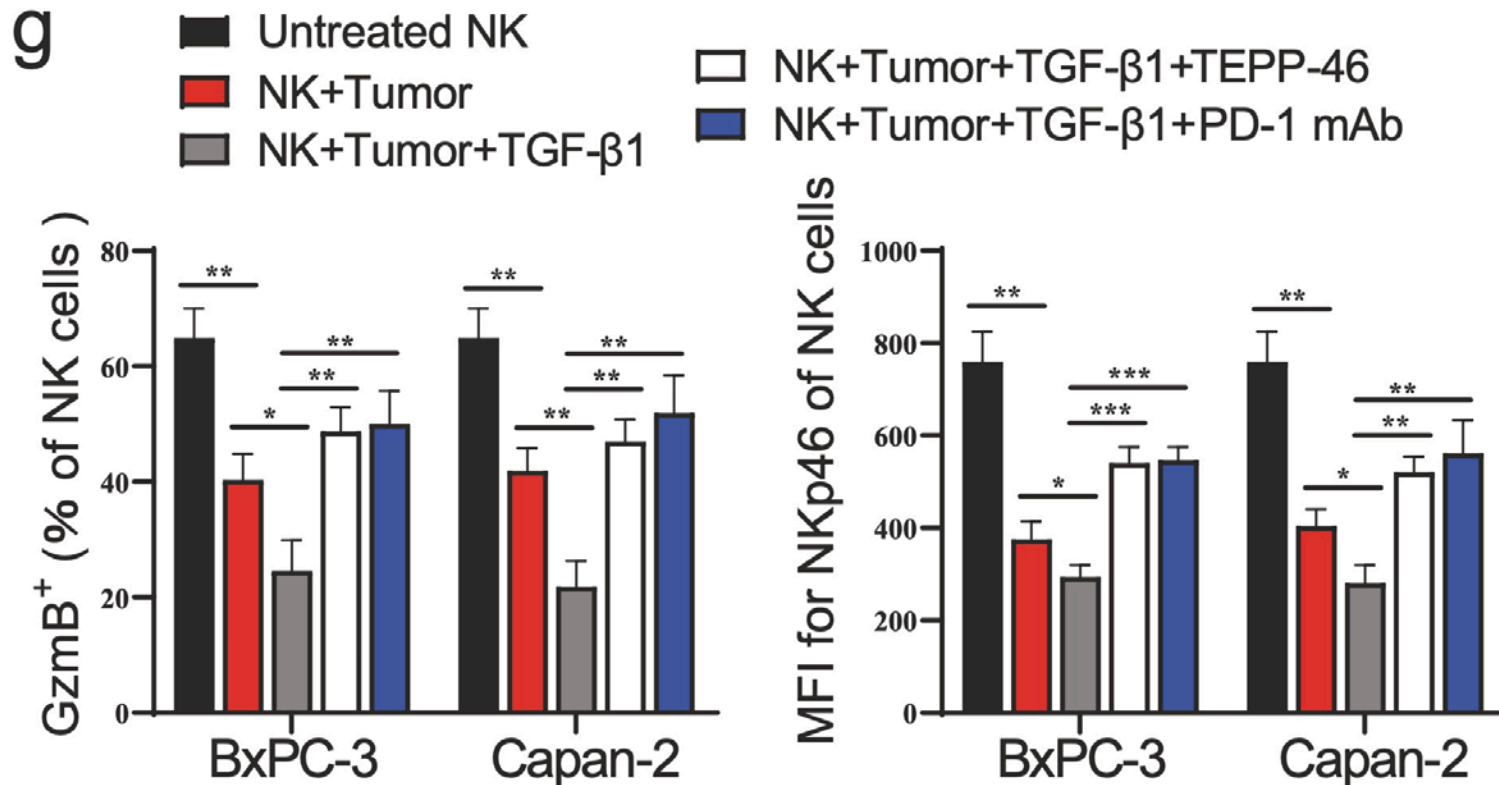

d

e

Could targeting PKM2 and PD-L1 enhance the antitumor immunity of NK cells?

*P < 0.05, **P < 0.01, ***P < 0.001

6. How does PKM2-mediated PD-L1 upregulation affect antitumor immunity of NK cells?

→ NK cell-mediated killing of PDAC cells was enhanced following the blockade of PKM2 nuclear translocation or PD-1/PD-L1 interaction *in vitro*.

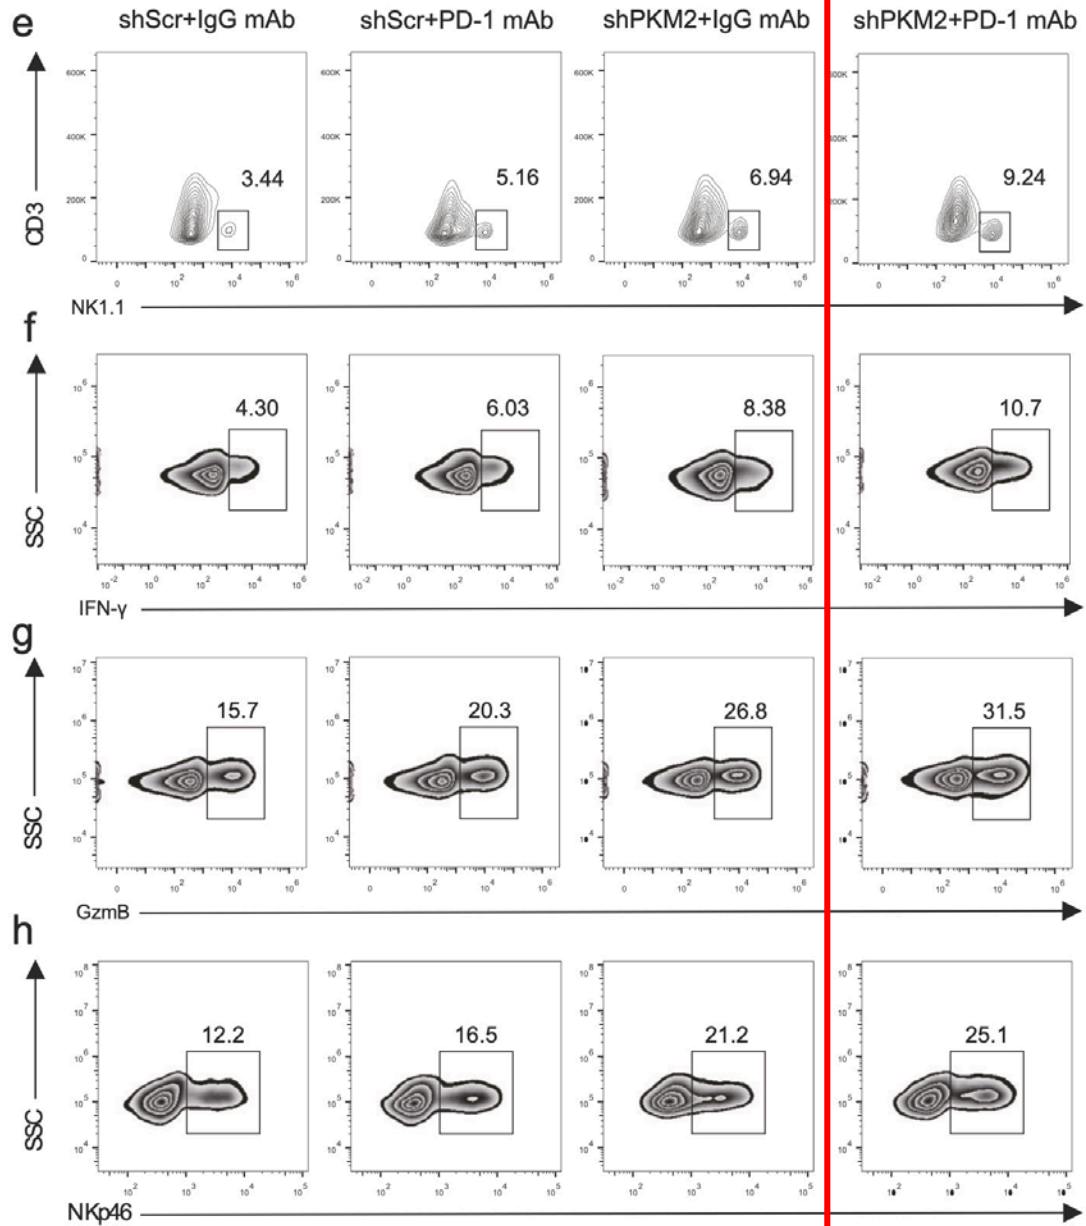

7. Does PKM2 deficiency enhance the antitumor effect of Anti-PD-1 blockade in PDAC (in mice with high infiltration of activated NK cells)?

Does PKM2 deficiency enhance the antitumor effect of Anti-PD-1 blockade?

Does PKM2 deficiency enhance the antitumor effect of Anti-PD-1 blockade?

■ shScr+IgG mAb
 ■ shScr+PD-1 mAb
 ■ shPKM2+IgG mAb
 □ shPKM2+PD-1 mAb

7. Does PKM2 deficiency enhance the antitumor effect of Anti-PD-1 blockade in PDAC (in mice with high infiltration of activated NK cells)?

→ Yes! Synergistic antitumor effect of combined PKM2 and PD-1/PD-L1 blockade may provide a potential therapy for treating PDAC.

Presentation Structure

- 1) Introduction
